

# Light Up Card

## Introduction

Making a beautiful card is not necessary to be just a colourful painting or drawing. You can enhance it with some excitement to the design by using light. The card can be designed for any occasion.

This task allows students to demonstrate their creativity in Art and at the same time learning about connecting the electric circuit. A simple switch circuit is incorporated into their card design and the light can be turned on when the switch is pressed.

Different card designs and connection template are enclosed in the package, students can also choose to create their own card designs.

# Light Up Card
